Groundbreaking and Startling Facts predicated on Mathematical Proof By HertzairA fascinating read that points towards our mysterious origins...someone or something, in deep antiquity, engineered things from the single source of the "Megalithic Yard" which strangely underlies all of the

constructions of our ancient megalithic structures and conforms incredibly with the metric system as well as English pounds and pints...an incredible coincidence that cannot be a coincidence, as it is beyond probability that it was by chance. What's really mind blowing is the ancients were able to devise the polar circumference from the megalithic math! If you really want to have your paradigm shifted, read about the math of the moon, sun and the earth and how all 3 are mathematically aligned in so many ways. The authors book "Who built the Moon" goes in to great detail on this and I highly recommend that book as well. The measurement systems also were used by the ancient Sumerians...the first known true and "sudden" Civilization with no real known predecessors...and if you know of Zacariah Sitchens works, the cuneiform tablets of the Sumerians speak of the ET race the Anunnaki, as teaching them all science and civilization...perhaps the authors should look at the Anunnaki as a possible source of their "Civilization One". 0 of 0 people found the following review helpful. Good research, questionable conclusion By Jamie Fellrath I had a hard time giving this book an average rating like this, because I think the research that the writers did was outstanding and amazing. I totally agree with them that there probably was a common link between many of the standards of measure that they talked about in the book, and was amazed at the methods that they used to come up with the standard of the Megalithic Yard and its associated measures. The problem for me was that I think it was an awfully big jump to try to ascribe this to a previous civilization. I have read a lot of books and research that show just how mentally competent our ancestors were at the discoveries and achievements they made. I get very incensed at the people who insist that "aliens" or whatever MUST have been involved in the creation of things like Stonehenge or the Pyramids or whatever because "there's no way that a bunch of savages could have done it." This book was doing really well until it started to assume a previous civilization HAD to be involved in the proliferation of the MY - I really don't see how this is any different a standpoint than the aliens supposition. 0 of 0 people found the following review helpful. In the beginning, there was sound... By Quiet One What an amazing book! I was enthralled!! Great read for anyone who has ever pondered who taught the architects and engineers that built the monolithic structures dating back to Neolithic man. But not only who taught them, but who taught those before them? How did we figure out how to measure length, volume, and time?

There must have been a Civilization One: a highly advanced precursor to the earliest recognized civilization. That's the conclusion reached in this fascinating book. Christopher Knight and Alan Butler began with a quest to crack the mystery of the ancient megalithic yard—a precise unit of measurement based on the motions of the Earth, Moon, and Sun. It seems beyond the comprehension of the supposedly unsophisticated people of Stone Age Britain, and yet the measurement kept appearing in ancient structures. The authors' breakthrough discovery goes far beyond the idea of prehistory, and has far-reaching theological ramifications.

About the Author Christopher Knight invested seven years conducting research into the origins of Freemasonic rituals. His first book, *The Hiram Key* (1996), co-authored with Robert Lomas, became an instant bestseller and has since been translated into 37 languages selling over a million copies worldwide. Alan Butler, an engineer, but fascinated by history, also became an expert in astrology and astronomy. He has researched ancient cultures, pagan beliefs and comparative religion and has published four successful books the *Knights Templar* and the *Grail* legend.
