## Years of the English Reformation (Studies in Medieval and Reformation Traditions):

This project examines the important implications of printed vernacular appeals to a nascent public by the reformer William Tyndale, by religious conservatives such as Thomas More, and by Henry VIII's regime in the volatile early years of the English Reformation. The book explores the nature of this public (materially and as a discursive concept) and the various ways in which Tyndale provoked and justified public discussion of the central religious issues of his day. Tyndale's writings raised important issues of authority and legitimacy and challenged many of the traditional notions of hierarchy at the heart of early modern European society. This study analyzes how this challenge manifested itself in Tyndale's ecclesiology and his political theology.
